

CMSC3621 Data Structures and Algorithms Lab

Lab Assignment 2

Overview:

This assignment is for the students to review about the basic concepts and usage of pointers in C++. The students need to complete the code in the 3 small programs and test them in Visual Studio.

Requirements:

1. Open the attached files: lab2-p1.cpp, lab2-p2.cpp and lab2-p3.cpp.
2. For each .cpp file, there are some comments which tell you what you need to do in the code.
3. You need to complete the code by changing the parts indicated by "To do" in the code based on what the comments ask you to fill.
4. After that, please run the program in VS environment.
5. Write a report in a PDF format and name the report as "Lab2_report.pdf". Screenshots and explanations are included to show how you tested your solutions.
6. Submit the source code and a document including screenshots and explanations to D2L. (Please see the instructions and example in the end of this document)

Submission:

Submit all four files above to D2L.

Rubrics:

lab2-p1 (22 points); lab2-p2 (28 points); lab2-p3 (35 points); report (15 points).

Any violation against the rules above will lead to extra penalty.

If you missed the report, your submission will not be evaluated.
